Re: Erin Heights Golf Course - Erin - Arborist Report and TPP

Mrs. Clarke,

As per your request, I have completed a site visit to Erin Heights Golf Course - Erin, in preparation for an arborist report and tree preservation with regards to the proposed subdivision.

The enclosed report inventories all trees greater than 10cm DBH, both on and within 6m of the subject site. This inventory will include individual tag #s, both common and botanical names, DBH and condition. Additionally, it will determine if any regulated trees are to be negatively impacted by the proposed development and provide a preservation strategy for all trees recommended for preservation.

Four hundred and sixty-six (466) trees have been inventoried as part of this project, none of which are Town owned. Four hundred (400) privately owned trees located on the subject site are in conflict with the proposed grading and are to be removed. Eight trees located on the adjacent properties are also in conflict with proposed grading and are to be removed. Additionally, thirty-four trees on the adjacent property cannot maintain 100% of their prescribed TPZs and are to be injured. Authorization from the Town and the appropriate neighbors is required prior to the removal of four hundred and eight trees and the injury of thirty-four.

I trust this report meets your needs, if you have any questions or concerns feel free to contact me at cgavin@canopyconsulting.ca.

Regards,

INTRODUCTION:

I have been commissioned by Mrs. Monica Clarke of *Alexander Budrevics & Associates*, to complete an arborist report and tree protection plan for the proposed development located at the Erin Heights Golf Course - Erin. The report will identify all trees greater than 10cm DBH, provide a preservation strategy with recommendations and a tree protection plan depicting the trees' locations, the existing conditions and any proposed work. All field work and data collection were completed by Cletus Gavin, RCA #613 on December 21, 2021.

HISTORY AND ASSIGNMENT:

Mrs. Clarke has provided a survey and grading plan identifying the proposed development at Erin Heights Golf Course - Erin as per the Tree Protection Plan – TPP-1 in Appendix I. Upon the request of the client or municipality, *Canopy Consulting*, can be further retained beyond the current scope of work to provide on-site monitoring services and to provide any remedial actions deemed necessary.

Scope of work:

1. Inventory all trees regulated by the municipality, both on and within 6m of the subject site. The inventory will include a tag #, species, DBH, condition, comments and recommendations.
2. Determine if any regulated trees are to be negatively impacted by the proposed development.
3. Provide a preservation strategy for all trees recommended for preservation.

ASSUMPTION AND LIMITING CONDITIONS:

1. Care has been taken to obtain all information from reliable sources. *Canopy Consulting* can neither guarantee nor be responsible for the accuracy of information provided by others.
2. This report may not be used for any expressed purpose other than its intended purpose and alteration of any part of this report invalidates the report. Excerpts or alterations to the report, without the authorization of the author or his company invalidates its intent and/or implied conclusions.
3. Unless expressed otherwise: 1) information contained in this report covers only those items that were examined and reflect the condition of those items at the time of inspection; and 2) the inspection was made using accepted arboricultural practices and is limited to visual examination of accessible items without climbing, dissection, probing or coring and detailed root examination involving excavation. While reasonable efforts have been made to assess trees outlined in this report, there is no warranty or guarantee, expressed or implied, that problems or deficiencies with the tree(s) or any part(s) of them may not arise in the future. All trees should be inspected and re-assessed periodically.
4. The determination of ownership of any subject tree(s) is the responsibility of the owner and any civil or common-law issues, which may exist between property owners with respect to trees, must be resolved by the owner. A recommendation to remove or maintain tree(s) does not grant authority to encroach in any manner onto adjacent private properties

TREE SURVEY AND RECOMMENDATIONS:

See TPP-1 plan in Appendix I for tree location, Table #1 for species identification, condition, and recommendations and Appendix II for corresponding Digital Images.

Table #1: Erin Heights Golf Course - Erin

Tree #	Species Common Name (Biological Name)	D ¹ B H (cm)	Condition ²	Category ³	Comments	Recommendation ⁴	M ⁵ T P Z (M)
912	Eastern White Cedar <i>Thuja occidentalis</i> (5)	25-32	F	1	- topped - in conflict with proposed grading	R	
913	Manitoba Maple <i>Acer negundo</i>	83	P	1	- hollow, cavity in trunk, large storm break, decay, in decline - in conflict with proposed grading	R	
914	Douglas Fir <i>Pseudotsuga menziesii</i>	23	P	1	- multiple cavities, fruiting bodies, in decline - in conflict with proposed grading	R	
915	Douglas Fir <i>Pseudotsuga menziesii</i>	26	F	1	- deadwood, in decline, cavity in trunk - in conflict with proposed grading	R	
916	Manitoba Maple <i>Acer negundo</i>	14	P	1	- severe lean, poor form, deadwood - in conflict with proposed grading	R	
917	Manitoba Maple <i>Acer negundo</i>	39	P	1	- severe lean, cavity at base, poor union with included bark - in conflict with proposed grading	R	
918	Manitoba Maple <i>Acer negundo</i>	63	P	1	- multi-stem, poor form and union, large cavity, fruiting bodies - in conflict with proposed grading	R	
919	Manitoba Maple <i>Acer negundo</i>	21	F	1	- poor form, deadwood, unbalanced - in conflict with proposed grading	R	
920	Manitoba Maple <i>Acer negundo</i>	51	P	1	- large cavity, seam in trunk, decay, storm break, in decline - in conflict with proposed grading	R	

¹ **DBH:** Diameter at Breast Height is a measurement in centimeters, using a caliper tape, of the tree stem at 1.37 meters above existing grade.

² **Condition:** A rating of **Hazardous/Dead/Poor/Fair/Good/Excellent** was determined for each tree by visually assessing all the above ground components of the tree, using acceptable arboricultural procedures as recommended in the "Guide for Plant Appraisal," prepared under contract by the "Council of Tree & Landscape Appraisers (CTLA), an official publication of the International Society of Arboriculture (I.S.A.), 9th Edition, 2000".

³ **Category #:**

1. Trees with diameters of 10 cm or more, situated on private property on the subject site.
2. Trees with diameters of 10 cm or more, situated on private property, within 6 m of the subject site.
3. Trees of all diameters situated on Town owned parkland within 6 m of the subject site.
4. Trees of all diameters situated within the Municipal road allowance.

⁴ **Recommendation:** Preserve (**P**), Preserve with Injury (**PI**), Remove (**R**), Transplant (**T**)

⁵ **MTPZ:** Minimum tree protection zone distance as recommended by Canopy Consulting.

Discussion:

Town Owned Trees:

1. As listed above, there are four hundred and sixty-six (466) regulated trees involved with this project, none of which are Town owned.

Privately Owned Trees Located within 6.0m of the Subject Site:

1. There are sixty-six regulated trees located on the adjacent private property within 6m of the subject site, being trees no. N1-N62 (Trees no. N60 and N62 are groups containing three trees each). Trees no. N2, N4, N10, N16, N17, N24, N26, N31, N32, N34, N35, N36, N37, N38, N42, N43, N44, N47, N50, N51, N54 and N62 are clear do the proposed development, shall retain their prescribed TPZ and as such, will not be disturbed during construction.
2. Trees no. N56-N61 are in conflict with proposed grading and are recommended for removal. Authorization from the Town and the corresponding neighbor is required prior to the removal of these eight trees.
3. Trees no. N1, N3, N5-N9, N11-N15, N18-N23, N25, N27-N30, N33, N39-N41, N45, N46, N48, N49, N52, N53 and N55 are encroached upon by the proposed grading and retaining wall. Such an encroachment is located outside the critical root zone on the outer edge of the TPZ. Roots disturbed in this area are likely to be 2-5cm in diameter. It is recommended a qualified arborist be on site to supervise excavation/grading within the TPZ, root prune as required and to provide any other remedial actions deemed necessary. This disturbance is minor and should have a minimal effect on the trees current conditions. Authorization from the Town and the corresponding neighbor is required prior to the injury of thirty-four trees.

Privately Owned Trees Located on the Subject Site:

1. There are four hundred trees located on the subject site, being tree no. 912-100 and 301-366 (Trees no. 912, 953, 966, 967, 972, 978, 993, 309, 310, 313, 314, 315, 316, 325, 327, 330, 333, 335, 340, 341, 344, 346, 351, 352, 353 are groups of trees – See Table #1 for number of trees in each group). All four hundred trees are in conflict with the proposed grading and are to be removed. Authorization from the Town is required prior to the removal of these trees.
2. All other trees located on or within 6.0m of the subject site have a DBH of less than 10cm and as such, were not included in this report.
3. To further protect each tree scheduled for preservation from the potential of construction disturbance, it is recommended that the below listed tree preservation recommendations are implemented.

ESTABLISH TREE PROTECTION ZONE

The purpose of the tree protection zone (TPZ) is to prevent root damage, soil compaction and soil contamination. Workers and machinery shall not disturb the tree protection zone in any way. To prevent access, the following is required:

- 1.1 Install hoarding as per attached Tree Protection Plan in Appendix I.

1.2 Hoarding shall consist of the following:

- 1.3 When visibility is a consideration and **upon approval from the Town**, 1.2-meter-high orange plastic web snow fencing on a 2"X4" frame is recommended.
- 1.4 **Upon approval from the Town**, substitute wooden and/or orange plastic web snow fencing hoarding with a page wire fence supported by T-bars.
- 1.5 No fill, equipment or supplies are to be stored within the tree protection zone.
- 1.6 Activities, which are likely to injure or destroy tree(s), are not permitted within the TPZ.
- 1.7 No objects may be attached to tree(s) within the TPZ.
- 1.8 Tree protection barriers are to be erected prior to the commencement of any construction or grading activities on the site and are to remain in place in good condition throughout the entire duration of the project.
- 1.9 Once all tree/site protection measures have been installed, you must notify Urban Forestry staff to arrange for an inspection of the site and approval of the site protection requirements.

- 1.10 No Hoarding shall be removed until all construction activity is complete.
- 1.11 A sign that is like the illustration below must be mounted on all sides of a tree protection barrier for the duration of the project. The sign should be a minimum of 40cm X 60cm and made of white gator board, laminates or equivalent material.

2.0 ROOT PRUNING

Where possible, hand dig areas closest to each tree to prevent any unnecessary tearing or pulling of roots. Removal of roots that are greater than 2.5 centimetres in diameter or roots that are injured or diseased should be performed as follows:

- 2.1 Preserve the root bark ridge (similar in structure to the branch bark ridge). Directional Root Pruning (DRP) is the recommended technique and should be used during hand excavation around tree roots. Roots are like branches in their response to pruning practices. With DRP, objectionable and severely injured roots are properly cut to a lateral root that is growing downward or in a favorable direction.
- 2.2 All roots needing to be pruned or removed shall be cut cleanly with sharp hand tools, by a Certified Arborist or by the PCA.
- 2.3 No wound dressings/pruning paint shall be used to cover the ends of each cut.
- 2.4 All roots requiring pruning shall be cut using any of the following tools:
- Large or small loppers
 - Hand pruners

- Small hand saws
- Wound scribes

2.5 Avoid prolonged exposure of tree roots during construction - keep exposed roots moist and dampened with mulching materials, irrigation or wrap in burlap if exposed for longer than 4 hours.

3.0 ESTABLISH MAINTENANCE PROGRAM

All maintenance work must be completed by the approved Project Consulting Arborist or an equivalent qualified arborist.

Pre-Construction:

3.1 Prune trees to remove deadwood, objectionable limbs while maintaining crown form.

During- Construction:

3.2 Irrigate tree preservation zones during drought conditions, June – September, to reduce drought stress.

3.3 Inspect the site every month to ensure that all hoarding is in place and in good condition. Inspect the trees to monitor condition.

Post-Construction:

3.4 Inspect the trees two times per year – May and September – to monitor condition for a minimum of two additional years.

4.0 LANDSCAPING

Any landscaping completed within the tree preservation zones, after construction is completed and hoarding has been removed, cannot cause damage to any of the trees or their roots. The trees must be protected for the same reasons listed above but without using hoarding.

4.1 **No grade changes** are permitted which include adding and/or removing soil.

4.2 **No excavation** is permitted that can cause damage to the roots of the tree.

4.3 **No heavy equipment** can be used to compact the soil within the tree preservation zone.

4.4 Any hard -surface sidewalks, paths, etc. should be constructed using permeable products such as interlocking stone, etc.

SUMMARY TABLE:

Tree Category	Total	Preserve	Preserve with Injury	Remove	Transplant
1 (Privately owned tree located on the subject site)	400	0	0	400	0
2 (Private tree located on adjacent property)	66	24	34	8	0
Total	466	24	34	408	0

CONCLUSIONS:

As listed in the Summary Table above, Four hundred and sixty-six (466) trees have been inventoried as part of this project, none of which are Town owned. Four hundred (400) privately owned trees located on the subject site are in conflict with the proposed grading and are to be removed. Eight trees located on the adjacent properties are in conflict with proposed grading and are to be removed. Additionally, thirty-four trees on the adjacent property cannot maintain 100% of their prescribed TPZs and are to be injured. Authorization from the Town and the appropriate neighbors is required prior to the removal of four hundred and eight trees and the injury of thirty-four. Finally, with the above in mind, it is the consultant's opinion that if the above tree preservation recommendations are implemented, which includes installing tree protection hoarding as outlined in this report, proposed construction will not adversely affect the long-term health, safety and/or existing condition of all trees scheduled for preservation.

Trusting this report meets your needs. For further information, you may contact me directly at (416) 300-2957 or by email at cgavin@canopyconsulting.ca.

Sincerely,

Cletus Gavin *B.Sc. Earth Science & Biology*
